ZUMA vacuum bag: print spec

Three front designs (red, blue, grey) and one back design shared by all three.

The bag

Type	Flat vacuum pouch, sealed on 3 sides, open at the top. We fill it with two glass vials and vacuum seal the top ourselves.
Size	100 x 150 mm outside. 5 mm seals. Tear notch on both sides, 18 mm from the top. Square corners (tell us if round corners are possible at no extra cost).
Material	PET/PA/PE laminate, clear and glossy, as in your listing. Please recommend the thickness for vacuum packing two small glass vials (we expect about 90 to 100 microns total).

Front panel (3 designs)

Plate 1: colour	**Transparent ink**, printed on clear film with **no white behind it**. It must stay see-through like tinted glass: the vials inside must be visible through the colour. One file per design: front-red, front-blue, front-grey.
Plate 2: white	Opaque white, only on the logo and text. The colour plate is knocked out under it. The same file for all three designs.

Back panel (same for all 3)

Print	Opaque white over the whole back panel, then the leaf shadow in grey (black ink, up to 72%) on top.

Files (folder "print")

Pages	Every file is 106 x 156 mm: the 100 x 150 mm bag plus 3 mm bleed. 600 dpi. Print runs over the seals to the edge.
Front	front-red-1-colour-transparent-ink.pdf, front-blue-1-..., front-grey-1-... and front-all-2-white-ink.pdf (black in this file = white ink).
Back	back-all-shadow-grey-K-on-white.pdf
Cut	dieline-100x150.pdf
Look	front-*-proof.jpg, back-proof.jpg and mockup-red-blue-grey.jpg show how it should look.

Please check: the smallest white text is about 4.5 pt. Tell us if it will not print cleanly in white on clear film, and we will enlarge it.

For laboratory research use only. Not for human or veterinary use.
