

YOJO · YOJO.SKIN · WEBSITE BRIEF

A website built around one object

YOJO is a skincare brand launching with a GHK-Cu copper peptide cream. It comes in a weighted silicone egg with a knurled chrome head that twists up to open and twists down to lock.

THE ASK

yojo.skin, phase one

The product is the website. We want the real vessel, as a 3D model, at the centre of the site: visitors turn the knurled head and the egg opens. It should feel like holding the object.

Phase one

- A landing experience built on our 3D model of the vessel, with a twist interaction and live colour changes.
- A product page and checkout for one product. We're open on the platform; tell us what you'd use.
- Mobile first. It has to feel as good on a phone as on a desktop.

Later phase

- A signed-in area for owners. We'll share the detail under NDA.

What we provide (after an NDA)

- A production 3D model of the vessel (GLB and Blender), with calibrated colours and materials
- The wordmark and Y mark as vectors, the palette, and high-resolution renders
- Mechanism animation of how the head works

What we'd like back

- Two or three projects you've shipped with real-time 3D or product configurators, with links
- How you'd approach the twist interaction, and your stack
- Rough timeline and cost for phase one
