ZUMA vacuum bag: print spec (blue)

One design. 10,000 bags. 4 plates.

The bag

Type	Flat vacuum pouch, sealed on 3 sides, open at the top. We fill it with two glass vials and vacuum seal the top ourselves.
Size	100 x 150 mm outside. 5 mm seals. Tear notch on both sides, 18 mm from the top. Square corners.
Material	PET/PA/PE laminate, clear and glossy. Please confirm the thickness you use for vacuum packing small glass vials.

The 4 plates

1. Front: blue	**Transparent blue ink** in tints (the light and dark blue squares), printed on clear film with **no white behind it**. It must stay see-through like tinted glass: the vials inside must show through the blue. File: vector/ZUMA-bag-front-blue.ai
2. Front: white	Opaque white on the logo and text only. The blue is knocked out under it. File: vector/ZUMA-bag-front-white-ink-plate.ai (black in this file = white ink).
3. Back: white	Opaque white over the whole back panel.
4. Back: black	The leaf shadow in black ink, up to 72%, printed on the white. File (plates 3 and 4): vector/ZUMA-bag-back.ai

Files

Vector (.ai)	Type converted to outlines. Page 106 x 156 mm (the 100 x 150 mm bag plus 3 mm bleed), with the cut, seals and notches drawn as thin lines (do not print them). Print runs over the seals to the edge.
Look	print/front-blue-proof.jpg, print/back-proof.jpg and print/mockup-blue.png show how it should look.

Please check: the smallest white text is about 4.5 pt. Tell us if it will not print cleanly in white on clear film, and we will enlarge it.

For laboratory research use only. Not for human or veterinary use.
